

Information Security Management System Policy

Protecting the assets and information of both the company and its clients is a primary concern for the organization. To achieve this, s.d.i. Automazione Industriale S.p.A. (hereafter “SDI”) has implemented an Information Security Management System (ISMS) to:

- Respond to market demands;
- Ensure a reliable market image;
- Guarantee the confidentiality, integrity, and availability of information and IT systems (cybersecurity);
- Mitigate risks to the security of corporate information;
- Ensure compliance with general and industry-specific laws and regulations, including privacy protection.

These objectives are reflected in the rules adopted by SDI to ensure their achievement. The cornerstone of these rules is the Information Security Policy and the procedures derived from it.

Information security management involves the entire company and is a significantly complex activity. Therefore, it is essential that all employees and third parties involved in company processes collaborate within their areas of responsibility, adhere to the rules and operational procedures outlined in the Information Security Management System documentation, and apply best practices and behaviors.

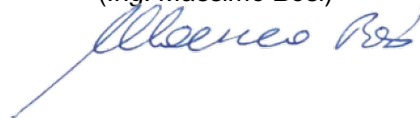

SDI’s Management promotes the development of a corporate culture oriented toward applying the rules and requirements of information security (to safeguard the company, clients, and third parties). It fosters awareness and engagement across all company functions to contribute to achieving security objectives and is committed to the continuous improvement of the Management System.
